

# Applied\_ML\_HW5\_NLP

April 30, 2022

## 1 Applied Machine Learning Homework 5

Due 2 May,2022 (Monday) 11:59PM EST

Name: Chandan Suri, UNI: CS4090

### 1.0.1 Natural Language Processing

We will train a supervised training model to predict if a tweet has a positive or negative sentiment.

```
[1]: # Imports
import pandas as pd

from sklearn.model_selection import train_test_split
from sklearn.feature_extraction.text import CountVectorizer
from sklearn.feature_extraction.text import TfidfVectorizer
from sklearn.linear_model import LogisticRegressionCV

from nltk.corpus import stopwords
from nltk.tokenize import word_tokenize
from nltk.stem import PorterStemmer

import string

random_seed = 42
```

Dataset loading & dev/test splits 1.1) Load the twitter dataset from NLTK library

```
[2]: import nltk
nltk.download('twitter_samples')
from nltk.corpus import twitter_samples
```

```
[nltk_data] Downloading package twitter_samples to
[nltk_data] /Users/chandansuri/nltk_data...
[nltk_data] Package twitter_samples is already up-to-date!
```

1.2) Load the positive & negative tweets

```
[3]: all_positive_tweets = twitter_samples.strings('positive_tweets.json')
all_negative_tweets = twitter_samples.strings('negative_tweets.json')
```

[4]: all\_positive\_tweets

```
[4]: ['#FollowFriday @France_Inte @PKuchly57 @Milipol_Paris for being top engaged

8	jgh , but we have to go to bayan :d bye	Positive
9	as an act of mischievousness, am calling the e...	Positive

```
[13]: dev_text, test_text, dev_y, test_y = train_test_split(all_tweets_df.Tweets,
↳all_tweets_df.Sentiment_Label,
                                                    test_size = 0.2,
↳random_state = random_seed)
```

```
[14]: print(f"The number of tweets in the development set are: {len(dev_text)}")
      print(f"The number of tweets in the test set are: {len(test_text)}")
      print(f"The number of labels in the development set are: {len(dev_y)}")
      print(f"The number of labels in the test set are: {len(test_y)}")
```

The number of tweets in the development set are: 8000

The number of tweets in the test set are: 2000

The number of labels in the development set are: 8000

The number of labels in the test set are: 2000

**Data preprocessing** We will do some data preprocessing before we tokenize the data. We will remove # symbol, hyperlinks, stop words & punctuations from the data. You can use the `re` package in python to find and replace these strings.

#### 1.4) Replace the # symbol with '' in every tweet

```
[15]: # For development
      dev_text.replace('#', '', inplace = True, regex = True)

      # For testing
      test_text.replace('#', '', inplace = True, regex = True)
```

#### 1.5) Replace hyperlinks with '' in every tweet

```
[16]: # For development
      dev_text.replace('http[^\ ]*', '', inplace = True, regex = True)

      # For testing
      test_text.replace('http[^\ ]*', '', inplace = True, regex = True)
```

#### 1.6) Remove all stop words

```
[17]: stop_words_joined = '|'.join(stopwords.words('english'))
      stop_words_regex = f'\s({stop_words_joined})\s'

      # For development
      dev_text.replace(stop_words_regex, ' ', inplace = True, regex = True)

      # For testing
      test_text.replace(stop_words_regex, ' ', inplace = True, regex = True)
```

#### 1.7) Remove all punctuations

```
[18]: puncts_regex = f"[{string.punctuation}]"

      # For development
      dev_text.replace(puncts_regex, '', inplace = True, regex = True)

      # For testing
      test_text.replace(puncts_regex, '', inplace = True, regex = True)
```

### 1.8) Apply stemming on the development & test datasets using Porter algorithm

```
[19]: porter = PorterStemmer()

def stem_sentences(tweets):
    pre_processed_tweets = list()

    for tweet in tweets:
        tokenized_tweet = word_tokenize(tweet)
        stemmed_tweet = [porter.stem(token) for token in tokenized_tweet]
        pre_processed_tweets.append(" ".join(stemmed_tweet))

    return pre_processed_tweets
```

```
[20]: dev_text = stem_sentences(dev_text)
      test_text = stem_sentences(test_text)
```

As we can see, all the data for tweets has been pre-processed completely!

### Model training 1.9) Create bag of words features for each tweet in the development dataset

```
[26]: count_vectorizer = CountVectorizer()
      dev_X = count_vectorizer.fit_transform(dev_text)
      test_cv_X = count_vectorizer.transform(test_text)
```

### 1.10) Train a supervised learning model of choice on the development dataset

```
[27]: lr_model_bow = LogisticRegressionCV(max_iter = 750, cv = 5, random_state = 
      ↪random_seed)
      lr_model_bow = lr_model_bow.fit(dev_X, dev_y)
```

### 1.11) Create TF-IDF features for each tweet in the development dataset

```
[28]: tfidf_vectorizer = TfidfVectorizer()
      dev_X = tfidf_vectorizer.fit_transform(dev_text)
      test_tfidf_X = tfidf_vectorizer.transform(test_text)
```

### 1.12) Train the same supervised learning algorithm on the development dataset with TF-IDF features

```
[29]: lr_model_tfidf = LogisticRegressionCV(max_iter = 750, cv = 5, random_state = 
      ↪random_seed)
      lr_model_tfidf = lr_model_tfidf.fit(dev_X, dev_y)
```

### 1.13) Compare the performance of the two models on the test dataset

```
[30]: print(f"The Accuracy Score for the Model (BOW) on Test Set is : {lr_model_bow.
      ↪score(test_cv_X, test_y)*100}%")
```

```
print(f"The Accuracy Score for the Model (TFIDF) on Test Set is :␣  
↪{lr_model_tfidf.score(test_tfidf_X, test_y)*100}%")
```

The Accuracy Score for the Model (BOW) on Test Set is : 75.35%

The Accuracy Score for the Model (TFIDF) on Test Set is : 76.14999999999999%

As seen above, the model is performing better with the TFIDF Vectorizer than the bag of words.
